We are Ataccama, a Czech-Canadian company, which has been doing global business for the past 10 years from Prague and Toronto. We are developing a software platform to help our Fortune 500 and other clients process, manage, and monitor (big) data. We always work with the latest technologies and have built one of the largest tech communities in Prague (CS HUG).

You'll never be bored with us. Aside from interesting work in our new Karlín office, you'll also find skateboards (for fast travel around the office), bikes and electro scooters (for fast travel outside the office), an Xbox, and lots of like-minded board game and sport enthusiasts. Ready to join us?

QA Engineer

Do you want to learn new things every day? Come to Ataccama, analyze user requirements, design test scenarios, and develop automated tests. As a QA Engineer, we'll appreciate some SQL and Linux shell experience, but if you're familiar with even more environments, that's great too!

Your challenge

- Understand user expectations and essential product features. Focus on the completeness of feature descriptions and testability during early stages of product development.
- Help us to achieve and maintain the high quality of daily releases. Discover new test automation technologies for web application testing, online and batch interfaces, and various backend components, without leaving performance and security tests behind.
- Work with the best tech. Our tests are based on Selenium, JUnit, JMeter and others, but we are always open to new ideas. Nothing is set in stone.

Is this you?

- You approach testing in a careful, systematic way based on your extensive knowledge of user needs.
- You are passionate about tech. If you have a stack of technology related literature at home, you'll find yourself in good company here at Ataccama.
- You see challenges as opportunities. Why wait for a task list when you can start innovating right away?
- You can effectively and comfortably communicate with English-speaking teams located around the world.

Skills

- Windows and Linux environments
- SQL and relational DB basics
- Linux shell commands
- Testing automation of complex web and backend applications

Bonus knowledge

- Java
- XSLT, XSD, XPath
- Oracle, PostgreSQL, MS SQL
- Perl or any other scripting language

Benefits & Perks

- Co-build a cutting-edge B2B Big Data platform
- Flexible working hours
- Experienced team to support your professional growth
- Chill & relaxed work environment
- Education (language courses, conference tickets, a well-stocked office library)
- "Unlimited playground" (We want you to be in the best place for you. There is room to switch to another team within the company if you feel it's the better challenge for you.)
- Hardware of your choice
- Office bikes, skateboards and electric scooters
- Legos, a playroom with an Xbox, a 3D printer
- Excellent coffee and refreshments in the kitchen
- Various company events (parties, outings, barbecues, etc.)
- Multisport card or Flexipass
- Weekly breakfast in the office
