

Job Description

Business Intelligence Consultant in Qlik Sense

Duration: Permanent

Start date: Jan 2020

Reports to: Head of Business Intelligence

Location: Prague, Czech republic

Overview

Company serves over 700 airline customers, with more than 35,000 staff at over 200 locations across 6 continents. There is a high demand for an accurate global view of the business and the efficient dissemination of information throughout the organisation.

The business intelligence consultant will be part of the **team of developers**, work with the business on multiple concurrent projects, create dashboards in Qlik Sense and NPrinting reports that are relevant to the business and allow them to make the best use of their BI data.

As the person responsible for the full lifecycle implementation, including **dashboard development** and addressing user requirements. The role holder should be highly talented and enthusiastic individual with a superb **attention to detail** and an acute sense of **expedience in delivery** to successfully work in the team and fulfil business requirements on relevant BI projects.

Main responsibilities include:

- Requirements gathering and consultancy aspects of BI dashboard development including briefing documents, technical exploration and delivery
- Dashboard development in industrialized Qlik 3-tier architecture with processes in place, data security requirements and overall best practices methods
- Implementation of ETLs, reporting systems, business intelligence technologies and high volume batch processing involving large data stores
- Ensuring adherence to the Menzies Service Management processes for the BI team, to meet service standards and SLA's defined

Experience, Skills and Qualifications:

- University degree, preferably IT oriented, engineering or mathematics
- Detailed knowledge of **Qlik Sense** development including **NPrinting** Designer
- At least 2-3 years' experience in **Qlik** development, or information management, data management, business analytics or architecture
- Solid knowledge of **SQL** technologies at DQL/DML level (data querying and modification)
- Familiarity with other BI technologies e.g. Tableau, Power BI is a plus, Advanced knowledge of Microsoft **Excel**
- Basic understanding of data warehousing techniques and Data Modelling
- Experience from Agile development methodologies, i.e.. Scrum

Soft Skills and further requirements:

- Occasional travel to client's locations, mainly within the United Kingdom
- Due to the 24/7 nature of the business, rather occasional out of hours and weekend work to accommodate business needs might be required
- Able to plan and manage own work and align with the team. Taking responsibility for the overall result.
- Excellent communication and interpersonal skills including the ability to relay difficult technical concepts to non-technical members of staff.
- Understanding of the business value of the big data usage and how to achieve it
- Fluent English is a must, Czech/Slovak is optional
- Right to work in the Czech republic

What we offer:

- Flexible working hours to some extent
- Results oriented approach for solving problems and time management
- Possibility of remote work (home-office)
- Standard 5 weeks of vacation plus additional days up to agreement
- Office at the airport location with direct overview of runway
- Global stakeholders and experience in multi-national corporation
